specified style in document.

Amendment to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

(Currently Amended) A method for detecting or selecting a dopaminergic neuron and/or a progenitor thereof, wherein the method comprises the step of contacting a cellular sample with a nucleic acid, wherein the nucleic acid comprises a sequence at least 80% identical to the complement of SEQ ID NO:13, 15 or 17, wherein the cellular sample comprises cells from the ventral midbrain of an animal.

2-8. (Cancelled)

- 9. (Currently Amended) A method for detecting or selecting a dopaminergic neuron and/or a progenitor cell thereof, wherein the method comprises the steps of:
- (a) contacting a cellular sample that comprises cells from the ventral midbrain of an animal with a nucleic acid, wherein the nucleic acid comprises a sequence at least 80% identical to the complement of SEQ ID NO: 13, 15, or 17, and
- (b) contacting the cellular sample with one or more polynucleotides or one or more antibodies, wherein the polynucleotide hybridizes under the washing conditions of 0.2x SSC and 0.1% SDS at 65°C to a polynucleotide that encodes a protein selected from the group consisting of Lmx1b, Nurr1, En1, Ptx3, and TH, and wherein the antibody binds to the protein.
- $10. \mbox{ (Previously Presented)} \qquad \mbox{The method of claim 9, which further comprises the step of:}$
- (c) contacting a cellular sample with one or more polynucleotides or one or more antibodies, wherein the polynucleotide hybridizes under the washing conditions of 0.2x SSC and 0.1% SDS at 65°C per wash to a polynucleotide that encodes a protein selected from DAT and ADH2 and wherein the antibody binds to the protein.

Appl. No. 10/580,989 Amdt. dated November 2010 Response to Notice of Allowance Error! No text of specified style in document.

- 11. (Previously Presented) The method of claim 9, wherein the protein is selected from the group consisting of Lmx1b, Nurr1, and En1.
- 12. (Currently Amended) A method for detecting or selecting a dopaminergic neuron and/or a progenitor cell thereof, wherein the method comprises the steps of:
- (a) contacting a cellular sample that comprises cells from the ventral midbrain of an animal with a nucleic acid, wherein the nucleic acid comprises a sequence of at least 80% identical to the complement of SEQ ID NO: 13, 15 or 17, and
- (b) contacting the cellular sample with a polynucleotide that hybridizes with one or more polynucleotides or one or more antibodies, wherein the polynucleotide hybridizes under the washing conditions of 0.2x SSC and 0.1% SDS at 65°C to a polynucleotide that encodes a protein selected from the group consisting of DAT and ADH2 and wherein the antibody binds to the protein.

13-26. (Canceled)

- 27. (Previously Presented) A method for detecting or selecting a dopaminergic neuron and/or a progenitor cell thereof, wherein the method comprises the step of contacting a cellular sample with a polynucleotide comprising the complementary sequence of:
 - (1) the nucleotide sequence of SEQ ID NO: 13;
- (2) a nucleotide sequence encoding a polypeptide comprising the amino acid sequence of SEO ID NO: 14;
 - (3) the nucleotide sequence of SEQ ID NO: 15 or 17; or
- (4) a nucleotide sequence encoding a polypeptide comprising the amino acid sequence of SEQ ID NO: 16 or 18;
- wherein the cellular sample comprises cells from the ventral midbrain of an animal
- 28. (Previously Presented) A method for detecting or selecting a dopaminergic neuron and/or a progenitor cell thereof, wherein the method comprises the steps of:

Appl. No. 10/580,989 Amdt. dated November 2010 Response to Notice of Allowance Error! No text of specified style in document.

- (a) contacting a cellular sample that comprises cells from the ventral midbrain of an animal with a polynucleotide comprising the complementary sequence of:
 - (1) the nucleotide sequence of SEQ ID NO: 13;
- (2) a nucleotide sequence encoding a polypeptide comprising the amino acid sequence of SEO ID NO: 14;
 - (3) the nucleotide sequence of SEQ ID NO: 15 or 17; or
- (4) the nucleotide sequence encoding a polypeptide comprising the amino acid sequence of SEQ ID NO: 16 or 18; and
- (b) contacting the cellular sample with one or more polynucleotides or one or more antibodies, wherein the complementary sequence of each of the polynucleotides encodes a protein selected from the group consisting of Lmx1b, Nurr1, En1, Ptx3, and TH, and wherein each of the antibodies binds to the protein selected from said group.
- 29. (Previously Presented) The method of claim 28, which further comprises the step of:
- (c) contacting the cellular sample with one or more polynucleotides or one or more antibodies, wherein the complementary sequence of each of the polynucleotides encodes a protein selected from DAT and ADH2, and wherein each of the antibodies binds to the protein selected from said group.
- 30. (Previously Presented) The method of claim 28, wherein the protein in step (b) is selected from the group consisting of Lmx1b, Nurr1, and En1.
- 31. (Previously Presented) A method for detecting or selecting a dopaminergic neuron and/or a progenitor cell thereof, wherein the method comprises the steps of:
- (a) contacting a cellular sample that comprises cells from the ventral midbrain of an animal with a polynucleotide comprising the complementary sequence of:
 - (1) the nucleotide sequence of SEQ ID NO: 13;

Appl. No. 10/580,989 Amdt. dated November 2010 Response to Notice of Allowance Error! No text of specified style in document.

- (2) a nucleotide sequence encoding a polypeptide comprising the amino acid sequence of SEQ ID NO: 14;
 - (3) the nucleotide sequence of SEQ ID NO: 15 or 17; or
- (4) a nucleotide sequence encoding a polypeptide comprising the amino acid sequence of SEQ ID NO: 16 or 18; and
- (b) contacting the cellular sample with one or more polynucleotides or one or more antibodies, wherein the complementary sequence of each of the polynucleotides encodes a protein selected from the group consisting of DAT and ADH2, and wherein each of the antibodies binds to the protein selected from said group.
